SHARON MAGETO

QA AUTOMATION ENGINEER | SOFTWARE QA | SYSTEMS SUPPORT

Nairobi, Kenya | +254 797 405 662 | sharonmageto405@gmail.com| LinkedIn Profile

PROFESSIONAL SUMMARY

Detail-oriented professional with hands-on experience across software quality assurance, IT support, database validation, cloud application support, and structured QA documentation. Skilled in manual testing, functional and regression testing, defect tracking, SQL-based data validation, and cross-browser testing. Developing practical QA automation capability using Playwright, with exposure to API testing using Postman, Git/GitHub, GitHub Actions, and CI/CD concepts. Strong troubleshooting, analytical, documentation, and collaboration skills.

CORE COMPETENCIES

- **Manual QA & Testing -** Functional testing • Regression testing • UI/UX validation • Cross-browser testing • Exploratory testing • UAT • Test case design and execution • End-to-End Test Planning • Risk-Based Testing •REST API Testing •Data Integrity Verification •SQL Backend Validation
- **Automation & Programming -** JMeter • Automation test design • TestNG/JUnit concepts • Playwright/Cypress awareness.• Javascript • Python
- **API, Database & DevOps -** Postman • REST API concepts • SQL • Database validation • Git • GitHub • GitHub Actions • CI/CD fundamentals AWS (Certified), Azure Fundamentals
- **Defect, Support & Analysis -** Jira • Bug reporting • Defect tracking • Root-cause support • Troubleshooting • AWS • Azure fundamentals • Technical documentation
- **Cloud & Environment Testing:** AWS-hosted Application Testing, Multi-environment Validation (Dev, QA, Staging, Prod), deployment verification testing, and Environment Configuration Validation

PROFESSIONAL EXPERIENCE

Software QA Analyst & IT Support Engineer | Blue Neuron Limited

Embedded support for DKT International & Game Changer Marketing Agency - Nairobi, Kenya | Nov 2023 - Mar 2026

- Execute structured functional, regression, UI, and exploratory tests across business applications and document defects with clear expected vs. actual results.
- Prepare test cases, test evidence, QA reports, and issue logs in Jira while maintaining traceability from defect detection through resolution and retesting.
- Use SQL to validate backend records, system outputs, and data integrity across supported applications.
- Build practical automation skills using Selenium WebDriver and Java for repeatable web application test scenarios.
- Use Postman and REST concepts for basic API validation, including response status, payload, and expected behavior checks.
- Use Git/GitHub for version control and gain exposure to GitHub Actions and CI/CD workflows.
- Support cloud-based application deployments and software/asset migration to AWS, including post-migration monitoring and validation.
- Maintain support records, user documentation, and knowledge-base content; contributed to a 28% reduction in recurring support tickets.

ICT Intern | Ministry of Education

Kisii, Kenya | Jan 2023 - Oct 2023

- Supported users working with NEMIS, TPAD, and KNEC-related systems, including access, record entry, data verification, and issue resolution.
- Performed first-line troubleshooting for software, hardware, network, and user-access incidents and documented resolutions.
- Checked submitted information for completeness and inconsistencies and guided users on corrective updates before final submission.
- Maintained digital support records, technical documentation, and user guides for recurring system and data-related issues.

Software QA Intern | Alumnipad (AlumniKenya)

Nairobi, Kenya | Sep 2021 - May 2022

- Created SQL queries to validate backend records and confirm data integrity during software testing.
- Executed functional, UI/UX, and cross-browser test cases across Chrome, Firefox, and Safari.
- Documented defects, inconsistencies, reproduction steps, and expected corrections, then collaborated with developers to verify fixes.
- Maintained organized test evidence and supported regression testing after application changes.

RELEVANT QA AUTOMATION PROJECTS

- Selenium Web Automation: Practiced automated browser interactions, element locators, form actions, login flows, validation checks, and reusable test logic using Selenium WebDriver and Java.
- API Testing: Used Postman to practice GET, POST, PUT, and DELETE requests, validate status codes, response bodies, headers, and positive/negative scenarios.
- Database Testing: Used SQL SELECT statements, filters, joins, and data comparisons to validate frontend information against backend records.

TECHNICAL TOOLS

- **Automation & Programming -** Selenium WebDriver • Javascript • Python • Playwright
- **API & Data -**Postman • REST APIs • SQL • Python • Pandas • Firebase
- **DevOps & Cloud -** Git • GitHub • GitHub Actions • CI/CD fundamentals • AWS • Azure Fundamentals
- **QA & Support -** Jira • Freshdesk • Excel • Google Sheets • Remote Desktop tools • Technical documentation
- **Security & Networking**: Forcepoint DLP, VPN
- **Support Tools:** Freshdesk, Jira Service Desk, Remote Desktop Manager,Asana

EDUCATION

Bachelor of Science in Computer Science - Chuka University, Meru | 2018 - 2022
Focus: Database Systems, Software Engineering, data-oriented programming, and application development.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (2025)
- ISTQB Foundation Level (2026)
- Forcepoint Administrator (2025)
- Security Operations Center Fundamentals
